

The diagram illustrates the process of information flow. On the left, a box represents the input or source, containing a blue shaded region. An arrow indicates the transfer of information to a larger box on the right, which represents the processing or output stage. Inside this larger box, a blue shaded region is shown with a white arrow pointing right, suggesting the direction of the processed information. Below the larger box, a horizontal bar is shown, divided into a blue shaded portion on the left and a white portion on the right, likely representing a distribution or state of the system.

This diagram is part of a larger document, as indicated by the page number '10' in the bottom right corner. The text above the diagram is partially obscured by a redacted area, but the diagram itself is clearly visible and appears to be a key component of the document's content.

The diagram is a schematic representation of a process or system. It consists of several interconnected elements: a source box on the left, a processing box on the right, and a horizontal bar at the bottom. The use of blue shading and arrows suggests a flow of information or a specific state of the system being modeled. The overall layout is clean and professional, typical of a technical or scientific document.
