4. Discussion
5. Conclusion

Figure 1: A line graph showing data trends over time.

The graph displays a series of data points connected by a blue line, showing a general upward trend over time.

The data points are connected by a blue line, and the overall trend is positive, indicating an increase in the measured variable over the period shown.

The graph illustrates the relationship between the variables, with the blue line representing the primary data series. The upward slope suggests a positive correlation between the variables.

The data points are connected by a blue line, and the overall trend is positive, indicating an increase in the measured variable over the period shown.

The graph displays a series of data points connected by a blue line, showing a general upward trend over time.
