

Computer system components

Computer system components

The computer system consists of several main components: the system unit, the monitor, the keyboard, and the mouse. The system unit is the central processing unit (CPU) and memory. The monitor displays the output of the system. The keyboard and mouse are input devices that allow the user to interact with the system.

The system unit is connected to the monitor, keyboard, and mouse. The monitor is connected to the system unit via a video cable. The keyboard and mouse are connected to the system unit via a USB cable.
