

Older Adults' Perceptions of the Impact of the 2008 Economic Recession on Their Well-Being

John W. Kim, PhD, and Robert M. Kaplan, PhD

Department of Health, Behavior, and Society, Johns Hopkins University

Abstract

The 2008 economic recession has had a significant impact on the well-being of older adults. This study examined older adults' perceptions of the impact of the recession on their well-being. Data were collected from a national survey of older adults in the United States. The study found that older adults perceived a significant impact of the recession on their well-being, particularly in terms of financial stability and health. The study also found that older adults with lower income and lower education levels were more likely to perceive a significant impact of the recession on their well-being.

Keywords: older adults, economic recession, well-being, financial stability, health

The 2008 economic recession has had a significant impact on the well-being of older adults. This study examined older adults' perceptions of the impact of the recession on their well-being.
