1. **Introduction**

The purpose of this study is to investigate the effects of the proposed system on the performance of the participants. The study was conducted in a laboratory setting with a sample of 30 participants.

2. **Methodology**

The study was conducted using a between-subjects design. The participants were divided into two groups: the control group and the experimental group.

3. **Results**

The results of the study showed that the proposed system had a significant positive effect on the performance of the participants. The experimental group performed significantly better than the control group in all measures of performance. The results were statistically significant at the 0.05 level.

The results of the study also showed that the proposed system had a significant positive effect on the satisfaction of the participants. The experimental group reported significantly higher satisfaction than the control group.

4. **Conclusion**

The study concluded that the proposed system had a significant positive effect on the performance and satisfaction of the participants. The results of the study suggest that the proposed system is a promising tool for improving performance and satisfaction in the workplace.
