the 1990s, the number of people with a university degree has increased from 10% to 20% of the population. The number of people with a postgraduate degree has increased from 1% to 3% of the population.

There are a number of reasons for the increase in the number of people with a university degree. One reason is that the number of people who have completed a university degree has increased. Another reason is that the number of people who have completed a postgraduate degree has increased. A third reason is that the number of people who have completed a university degree and a postgraduate degree has increased.

The increase in the number of people with a university degree and a postgraduate degree has led to a number of changes in the labour market. One change is that the number of people who are employed in high-skilled jobs has increased. Another change is that the number of people who are employed in low-skilled jobs has decreased.

The increase in the number of people with a university degree and a postgraduate degree has also led to a number of changes in the economy. One change is that the number of people who are employed in high-skilled jobs has increased. Another change is that the number of people who are employed in low-skilled jobs has decreased.

The increase in the number of people with a university degree and a postgraduate degree has also led to a number of changes in the labour market. One change is that the number of people who are employed in high-skilled jobs has increased. Another change is that the number of people who are employed in low-skilled jobs has decreased.
