

The diagram illustrates a process flow starting from a large rectangular block at the top left. A horizontal line connects this block to a smaller rectangular block. From there, the flow continues to a larger, more complex rectangular block. Below this complex block, a horizontal line leads to another large rectangular block. This second large block feeds into a horizontal line that leads to a final rectangular block. A vertical line also branches off from the horizontal line before the final block, leading to a separate rectangular block. The diagram uses various shades of gray and blue to represent different components and flow paths.
