

QUESTION

Two resistors are connected in parallel across a 12 V battery. The current through the 4 Ω resistor is 3 A. Calculate the current through the 6 Ω resistor.

Two resistors are connected in series across a 12 V battery. The current through the 4 Ω resistor is 3 A. Calculate the current through the 6 Ω resistor.

Two resistors are connected in parallel across a 12 V battery. The current through the 4 Ω resistor is 3 A. Calculate the current through the 6 Ω resistor.

Two resistors are connected in series across a 12 V battery. The current through the 4 Ω resistor is 3 A. Calculate the current through the 6 Ω resistor.

Two resistors are connected in parallel across a 12 V battery. The current through the 4 Ω resistor is 3 A. Calculate the current through the 6 Ω resistor.

Two resistors are connected in series across a 12 V battery. The current through the 4 Ω resistor is 3 A. Calculate the current through the 6 Ω resistor.

Two resistors are connected in parallel across a 12 V battery. The current through the 4 Ω resistor is 3 A. Calculate the current through the 6 Ω resistor.

Two resistors are connected in series across a 12 V battery. The current through the 4 Ω resistor is 3 A. Calculate the current through the 6 Ω resistor.

Two resistors are connected in parallel across a 12 V battery. The current through the 4 Ω resistor is 3 A. Calculate the current through the 6 Ω resistor.

Two resistors are connected in series across a 12 V battery. The current through the 4 Ω resistor is 3 A. Calculate the current through the 6 Ω resistor.

Two resistors are connected in parallel across a 12 V battery. The current through the 4 Ω resistor is 3 A. Calculate the current through the 6 Ω resistor.

Two resistors are connected in series across a 12 V battery. The current through the 4 Ω resistor is 3 A. Calculate the current through the 6 Ω resistor.
