1. *Introduction*

2. *Methodology*

The study was conducted in a laboratory setting. The participants were recruited from a local university and were assigned to two groups: the control group and the experimental group. The control group consisted of 15 individuals, while the experimental group consisted of 15 individuals. The experimental group was subjected to a series of interventions designed to improve their performance. The control group was not subjected to any interventions. The data was collected over a period of 12 weeks. The results of the study are presented in the following sections. The first section discusses the results of the control group, and the second section discusses the results of the experimental group. The final section discusses the overall findings of the study and the implications for future research.
