

The diagram illustrates the relationship between the two components. The vertical line represents a connection or interface between the two boxes. The horizontal line indicates a specific level or boundary. The overall structure suggests a vertical assembly or a specific configuration of parts.

Further details of the diagram are provided in the following sections. The components are labeled and their dimensions are specified. The diagram is a technical drawing used to define the geometry and assembly of the parts.

The diagram is a technical drawing used to define the geometry and assembly of the parts. It shows the relative positions and dimensions of the components. The drawing is a schematic representation of the physical assembly.
