

Table 1. The results of the experiment.

The results of the experiment are shown in Table 1. The first column shows the number of trials, and the second column shows the number of correct responses.

The results show that the number of correct responses increases with the number of trials. This suggests that the subjects are learning the task over time.

The results also show that the number of correct responses is higher for the first trial than for the subsequent trials. This is likely due to the initial uncertainty of the subjects.

The results of the experiment are consistent with the hypothesis that the subjects are learning the task over time. The number of correct responses increases with the number of trials, and the number of correct responses is higher for the first trial than for the subsequent trials.

The results of the experiment are consistent with the hypothesis that the subjects are learning the task over time.
