

1. **Introduction**

The purpose of this study is to investigate the effects of a new educational program on student learning outcomes. The program is designed to enhance critical thinking and problem-solving skills through a series of interactive activities and projects.

2. **Methodology**

The study employed a quasi-experimental design, comparing the performance of students who participated in the program (the experimental group) with those who did not (the control group). Data was collected through standardized tests and surveys.

3. **Results**

The results of the study indicate that students in the experimental group showed significantly higher scores on the standardized tests compared to the control group. This suggests that the program had a positive impact on learning outcomes.

4. **Conclusion**

Based on the findings, it is concluded that the new educational program is effective in improving student learning outcomes. Further research is needed to explore the long-term effects of the program.
