CHAPTER 10

The first part of the chapter discusses the basic concepts of the theory of the firm, including the production function, cost functions, and profit maximization. It also covers the relationship between the firm's production and the market equilibrium.

The second part of the chapter discusses the theory of the firm in a dynamic context, including the role of capital accumulation and investment decisions.

The third part of the chapter discusses the theory of the firm in a multi-period context, including the role of intertemporal optimization and the determination of the firm's investment and production decisions over time.

The fourth part of the chapter discusses the theory of the firm in a multi-agent context, including the role of strategic interaction and the determination of the firm's investment and production decisions in a competitive environment.
