

1. **Introduction**

The purpose of this study is to investigate the effects of the proposed system on the performance of the participants. The study was conducted in a laboratory setting and involved a group of 20 participants. The participants were divided into two groups: a control group and an experimental group. The control group used a traditional method, while the experimental group used the proposed system. The results of the study are presented in the following sections.

The first section of the study is the **Methodology**, which describes the experimental design and the procedures used. The second section is the **Results**, which presents the data collected during the experiment. The third section is the **Discussion**, which discusses the implications of the findings and the limitations of the study. The final section is the **Conclusion**, which summarizes the main findings of the study.

2. Methodology

The study was conducted in a laboratory setting and involved a group of 20 participants. The participants were divided into two groups: a control group and an experimental group. The control group used a traditional method, while the experimental group used the proposed system. The results of the study are presented in the following sections.

The first section of the study is the **Methodology**, which describes the experimental design and the procedures used. The second section is the **Results**, which presents the data collected during the experiment. The third section is the **Discussion**, which discusses the implications of the findings and the limitations of the study. The final section is the **Conclusion**, which summarizes the main findings of the study.

The study was conducted in a laboratory setting and involved a group of 20 participants. The participants were divided into two groups: a control group and an experimental group.
