

1. Introduction

The purpose of this study is to investigate the effects of the independent variable on the dependent variable. The study is based on the following hypotheses:

H1: There is a positive relationship between the independent variable and the dependent variable.

H2: There is a negative relationship between the independent variable and the dependent variable.

The study is based on the following theoretical framework:

The independent variable is defined as the variable that is manipulated in the study. The dependent variable is defined as the variable that is measured in the study.

The study is based on the following research design:

The study is a quantitative study using a survey design. The data is collected from a sample of participants.

The study is based on the following data analysis:

The data is analyzed using statistical methods. The results are presented in the following tables and figures.

The study is based on the following conclusions:

The results of the study support the hypotheses. There is a positive relationship between the independent variable and the dependent variable. There is a negative relationship between the independent variable and the dependent variable.
