1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance against a desired state or goal.

2. Once a problem is identified, the next step is to define the problem more precisely. This involves determining the scope of the problem and the specific areas that need to be addressed.

3. The third step is to analyze the causes of the problem. This is done by identifying the underlying factors that are contributing to the problem and determining how they are related to each other.

4. The fourth step is to develop a plan of action. This involves identifying the specific steps that need to be taken to address the problem and determining the resources that will be needed to implement the plan.

5. The fifth step is to implement the plan. This involves putting the plan into action and monitoring progress to ensure that the problem is being addressed effectively.

6. The sixth step is to evaluate the results. This involves comparing the current performance against the desired state and determining whether the problem has been resolved.

7. The seventh step is to take corrective action. This involves identifying any areas where the plan was not followed and determining the steps that need to be taken to correct the problem.

8. The eighth step is to prevent the problem from recurring. This involves identifying the underlying causes of the problem and implementing measures to prevent them from happening again.

9. The ninth step is to review the process. This involves reflecting on the entire process and identifying any areas for improvement.

10. The tenth step is to document the process. This involves creating a record of the steps that were taken to address the problem and the results that were achieved.

11. The eleventh step is to share the results. This involves communicating the findings of the process to other stakeholders and providing them with the information they need to make informed decisions.

12. The twelfth step is to continue to monitor and improve the process. This involves regularly reviewing the process and making adjustments as needed to ensure that it remains effective.
